CONNECTED WASH

Connects to digital networks for greater safety and efficiency

INNOVATIVE WASH FIELD

Flow-optimised and with new nozzle geometry: for water savings of up to 25 %

SEE FOR YOURSELF.

Glasses. Dishes. Cutlery. Baking sheets and trays. Bakers' and butchers' crates. For every space, large or small. There's a simple idea behind the UC Series: it's made to meet all your needs and requirements. An all-in-one system. But configurable in a way that results in a customised solution. Your dream machine.

The UC mission: sparkling glasses, clean dishes and impeccable cutlery. Delivering satisfaction to your guests.

FOR EVERY SPACE, LARGE OR SMALL

The UC Series is available in four different sizes: S, M, L and XL. You can choose the machine size that fits best with your available space and your wash items. Whatever size you choose: it goes without saying that there's a rack for every application.

CUSTOMISED SOLUTION

Made just for you: the UC comes as a glass, dish, cutlery or bistro washer depending on the application. Every machine has three programmes which adapt to the shape and size of the wash items and the level of soiling.

ECONOMICAL AND EFFICIENT

The new UC Series is even more economical to operate: the optimised wash field reduces water consumption by up to 25 % compared to the previous model. Consumption of electricity and chemicals also drops, further minimising overall operating costs. All this with first-class wash results.

USER-FRIENDLY

A smart touch display with programme and progress indicator. Single-button operation. Ergonomic door handle. Easy to clean, with two wash fields that can be removed with one hand at the push of a button. Operation of the UC is easy and intuitive.

PERFECT CLEANLINESS AND HYGIENE

Sparkling and hygienically clean. Visually unblemished. The UC guarantees perfect wash results over and over again. For the highest standards of cleanliness and hygiene. And the highest standards of quality and reliability.

ENERGY HEAT RECOVERY SYSTEM

Less energy consumption, maximum efficiency and a more comfortable room climate: every UC machine is optionally available with an integrated Energy function – an efficient, patented circulating air heat recovery.

VARIOPOWER WASHING PRESSURE ADJUSTMENT

Every UC has VarioPower as standard: the automatic variable water pressure regulation in combination with the selected washing programme ensures that fine glasses and fragile bowls are washed at low water pressure, while sturdy dishes are washed at a higher water pressure.

WATER TREATMENT

For even better wash results and to protect the machine: every UC is available with an integrated softener as an option. This is built into the machine to save space and provides continuous soft water. As a result, detergent and rinse aid can take optimum effect and limescale deposits in the machine are reduced significantly. For the highest standards of water quality, there is the UC Excellence-i with integrated reverse osmosis: this provides sparkling glasses and gleaming cutlery – with no polishing.

CONNECTED WASH

Greater safety, greater efficiency: the UC can be linked to a computer or mobile device via CONNECTED WASH. This enables analysis and evaluation of all important operating data. For optimisation of the entire washing process.

FLEXIBILITY

The UC concept has proven itself over many years and has made the series highly successful: one machine technology for four different applications. The UC comes customised precisely to your specific needs: as a glass, dish, cutlery or bistro washer. Every machine has three programmes which adapt to the shape and size of the wash items and the level of soiling. And if your preferred application ever changes: your service technician can reconfigure the machine and turn a glasswasher into a bistro washer. So you always have flexibility.

SMART TOUCH DISPLAY

Prepared for the future: a smart touch display works as the navigation of the UC. Single-button operation. A clear user interface with self-explanatory pictograms. With gesture control we all know from smartphones. The display responds sensitively and is also easy to use when wearing gloves. The surface is made of glass and is very robust: it has been tested under extreme conditions.

[SHOP PT SERIES](#)

PIECEWORK.

Rush hour in the kitchen. The PT from Winterhalter is at the heart of it all. Racks with dirty dishes are loaded from the inlet table. The wash cycle starts. The clean dishes are taken out on the other side. No unnecessary waiting. Everything is perfectly coordinated, everything runs smoothly. A perfect washing process. The PT Series makes this possible: its innovative technology is designed to meet the highest demands and is streamlined for maximum economy. An all-rounder for a wide range of wash items. Fast, economical and efficient.

RAPID WASHING SPEED

Washing with the PT means saving time: hood up, rack out, new rack in, hood down. And while the machine gets to work, the clean dishes can be cleared away and the next rack filled.

PERFECT WASH RESULTS

The PT Series is full of technical innovations: the sum of all the carefully designed details makes this warewashing system extremely efficient. And ensures first-class cleanliness and hygiene.

SIMPLE TO USE

Touch screen with self-explanatory pictograms. Start button for single-button operation. Guided self-cleaning programme. Another distinctive feature of the PT Series: refreshingly simple and intuitive operation.

CUSTOMISED SOLUTION

Perfectly adapted to the space available to you and your dishes: the PT is available in sizes M, L and XL. There are four different variants for you to choose from: a dish, glass, bistro and cutlery washer. Each of these has up to three standard programmes as well as other individual setting options.

ECONOMICAL AND EFFICIENT

Intelligent use of energy. Low water consumption. Perfect wash results. The PT warewashing system is a lesson in how to combine first-class wash results with maximum cost-effectiveness.

A detailed overview of the PT Series is available on our website at:

>> www.winterhalter.co.uk/pt

VARIABLE WASHING PRESSURE ADJUSTMENT

Every PT comes with variable water pressure regulation as standard: »VarioPower« adjusts the washing pressure precisely to the type of wash items and how dirty they are. Fine glasses and fragile bowls are washed at low water pressure, while sturdy dishes are washed at a higher water pressure. Soiling is removed without fail – while the dishes are treated gently.

FULL-FLOW FILTRATION

The cleaner the wash water, the better the wash result. That's why the PT comes with full-flow filtration. During stage 1, the tank cover feeds all of the water into a filter cylinder. During stage 2, the coarse dirt particles are removed, followed by the finer particles. The Mediamat then filters out the finest particles, such as coffee grounds, during stage 3. Finally, during stage 4, the pump inlet filter gets to work, protecting the pump from mechanical damage. As a result, the wash water remains clean at all times.

WASTE WATER HEAT RECOVERY

The standard equipment of the PT Series includes »EnergyLight« waste water heat recovery: the heat exchanger uses the energy from the waste water to heat the cold inlet water. The advantage: you save on resources and energy costs are reduced by up to 10% per wash cycle.

EXHAUST AIR HEAT RECOVERY

This option quickly pays for itself in contrast to the »EnergyLight« waste water heat recovery system that is fitted as standard, »EnergyPlus« offers both a more efficient waste water heat exchanger and an exhaust air heat exchanger. It uses the energy from the hot steam to pre-heat the cold inlet water. The advantage: up to 20% of the operating costs are saved every wash cycle. When you open the machine, hardly any steam escapes.

HEAT PUMP

In addition to the two systems for waste water and exhaust air heat recovery, the »ClimatePlus«* heat pump is also available as an option for the PT in sizes M and L: this not only draws on the thermal energy from inside the machine to heat the tank and rinse water – it also uses the heat from the air in the room. This reduces the operating costs by up to a further 50%, lowers the humidity level in the air and makes for a much more pleasant kitchen environment thanks to its air-conditioning effect.

DRIVEN RINSE SYSTEM

Take advantage of every opportunity to make savings: the PT comes with a driven rinse system as an option. Unlike conventional systems, a small electric motor provides the drive. As a result, the rinse water volume is reduced by up to 17%. Your operating costs are reduced accordingly.

* Fluorinated greenhouse gases contained in a hermetically sealed device; refrigerant R134a, 0.75 kg, 1.07 tonnes of CO₂ equivalent; greenhouse gas potential 1430.

UF | GETS THE JOB DONE.

Immense power. Vigorous water pressure. The powerful and robust utensil washer. For heavy-duty soiling.

FULL POWER.

This is the real test for a warewasher. Extremely stubborn soiling. On a variety of utensils. When washing becomes a challenge, the UF Series from Winterhalter is in its element. Robust design. With immense power. And innovative features: for excellent wash results and maximum hygiene. Are you a baker, butcher or caterer who washes dishes in extreme conditions? The UF is the machine for you.

ERGONOMIC OPERATION

Touch screen and quick-start button. Fold-back door. Rack dolly and swing rack. These and many other features make operation of the UF easy and particularly ergonomic.

QUALITY AND RELIABILITY

Washing utensils under extreme conditions. The UF Series is specially designed for this: the high-quality materials and solid finish make the machine robust, reliable and extremely durable.

PERFECT WASH RESULTS

Whether it's proteins, starch or grease: the UF deals with extremely heavy and stubborn soiling. With a high-performance washing system and a soaking programme, it is perfectly designed for the professional washing of utensils.

CUSTOMISED SOLUTION

Perfectly adapted to your dishes: the UF is available in three different sizes. The compact UF-M is ideal for smaller and medium-sized utensils. The UF-L has additional entry height that allows even large baking trays to be washed. And the UF-XL has sufficient capacity for large and bulky utensils.

HYGIENE SAFETY

Wherever food is in a working environment, hygiene standards apply. The UF ensures that you can comply with these easily: with a well conceived machine interior. It is based on a machine construction that makes cleaning very easy.

A detailed overview of the UF Series is available on our website at:

>> www.winterhalter.com/uf

HIGH-PERFORMANCE WASHING SYSTEM

Every UF comes with a stainless steel high-performance washing system as standard: the special geometry of the wash arm and a water pressure of up to 1 bar ensures optimal cleaning performance throughout the entire interior of the machine. The »VarioPower« variable water pressure system ensures that the washing pressure can be adjusted to suit how dirty the wash items actually are. The result: perfectly washed utensils and maximum hygiene.

FOLD-BACK DOOR

With the UF Series utensil washers, it's not just washing that runs smoothly. Cleaning the interior of the machine is also a breeze: the optional fold-back door can be unlocked and simply folded down. This means there is nothing in the way, and the interior of the machine is easily accessible.

RACK DOLLY

Ergonomic. Practical. Uncomplicated. With a rack dolly, which is available as an accessory, bulky and heavy wash items can be collected quickly and transported to the machine with ease. Once there, the rack is simply pushed directly from the dolly into the machine. And after washing, everything can be sorted and put away just as quickly. For optimal workflow in the kitchen.

HEAT RECOVERY

Intelligent use of energy: as an option, the UF can be fitted with integrated »Energy« circulating air heat recovery. This uses the energy from the hot steam to pre-heat the cold inlet water. This significantly reduces energy consumption, lowers operating costs and ensures that hardly any steam escapes when the machine is opened.

COLD WATER PRE-WASH

Anyone who works with proteins and starch will know: it's important to pre-wash with cold water to avoid baking the dirt onto the wash items. All UF Series utensil washers can be equipped with cold water pre-washing as an option. Clean, cold water releases the dirt before the actual wash cycle begins. This guarantees a hygienically clean wash result and reduces the work involved in manual pre-washing.

WARM WATER INITIAL FILL

The machine is ready to start in just a few minutes: as an option, the UF can be configured so that the tank is filled directly with warm water. The warewasher is therefore ready for operation more quickly and consumes less energy. Of course, the same applies when changing the tank water in the course of a washing day.
